Good morning,

The Pre-RD group is planning to perform fish tissue sampling activities near RM 23.1 (SMB-130), RM 24.8 (SMB-133) and RM 25.4 (SMB-134) today. The crew has just arrived to the first target location, SMB-130/RM 23.1 and has retrieved their first sample (photo 3). The SMB has been classified by Pre-RD group as very healthy, 371 cm in length, and 1.38lb.

The sample was measured, immediately bagged and then placed on ice.
